

## Celsis Financial Impact Assessment

Hundreds of manufacturing facilities worldwide have saved millions of dollars by adopting Celsis rapid detection systems. Most companies implementing Celsis realize payback on their investment in just 6–9 months with an average 5-year Net Present Value (NPV) in excess of \$500,000 per facility.

### The Benefits of Celsis

- Shortened production cycles
- Reduced inventory requirements
- Decreased working capital requirements
- Lower safety stock needs
- Faster response to contamination events
- Diminished waste, less water and energy use

### Quantifiable Savings

To help you quantify the overall value of implementing a rapid detection system, Celsis offers a complimentary Financial Impact Assessment. Using readily available information from your company, such as the cost of capital, average value of daily finished goods and current days products are held for micro testing, you can project your company's cost savings over the next five years as well as payback period for implementing a Celsis rapid detection system at one or multiple plants. The resulting Impact Report is specific to your company, confidential and yours to keep.

Smart science for smart business™

# Quantify the Savings

## Accurate, Customized Results in Three Easy Steps

**Step 1.** Complete a simple questionnaire with Celsis, during which we will collect necessary model inputs about your company, including readily available manufacturing, quality assurance and financial variables.

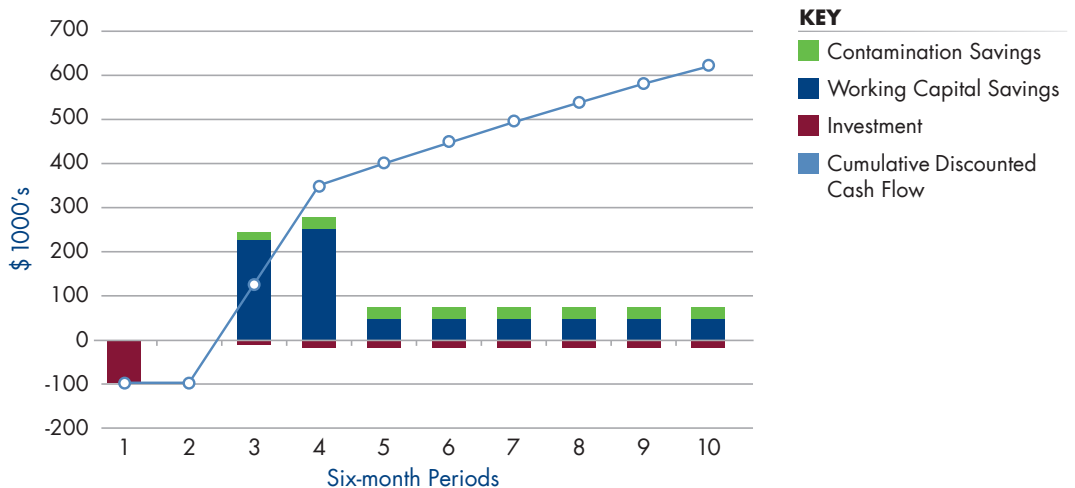

**Step 2.** Based on your company data, the Financial Impact Assessment calculates the 5-year net present value (NPV) and payback period for the investment, including the cost reductions associated with an improved response to contamination events.

**Step 3.** Your Celsis representative provides a customized Impact Report with your company's confidential results to you and your management team.

## Quantifiable Value

### Financial Impact Assessment

Companies adopting Celsis typically realize a return on their investment in 6–9 months and a 5-year NPV of more than \$500,000 for a single plant.

## Next Steps
